<b>Preface</b>	<b>xix</b>
<b>Chapter 1 Sound Wave Propagation</b>	<b>1</b>
<b>1.1 INTRODUCTION</b>	<b>1</b>
1.1.1 Sound Waves in Nonpiezoelectric Materials: One-Dimensional Theory,	2
<i>Stress,</i>	3
<i>Displacement and strain,</i>	4
<i>Hooke's law and elasticity,</i>	4
<i>Equation of motion,</i>	4
<i>Conservation of mass,</i>	5
<i>The wave equation and definition of propagation constant,</i>	5
<i>Energy,</i>	6
<i>Poynting's theorem,</i>	7
<i>Acoustic losses,</i>	8
<i>Acoustic impedance,</i>	9
<i>Shear waves,</i>	13
<i>Extensional waves,</i>	14
Problem Set 1.1,	15
<b>1.2 PIEZOELECTRIC MATERIALS</b>	<b>17</b>
1.2.1 Constitutive Relations,	17
<i>Poling and domains in ferroelectric materials,</i>	19

1.2.2 Effect of Piezoelectric Coupling on Wave Propagation in a Medium of Infinite Extent, 21

*Piezoelectrically stiffened elastic constant, 21*

*Stress-free dielectric constant, 22*

Problem Set 1.2, 22

### 1.3 ENERGY CONSERVATION IN PIEZOELECTRIC MEDIA 24

Problem Set 1.3, 26

### 1.4 PIEZOELECTRIC TRANSDUCERS 27

1.4.1 Introduction, 27

1.4.2 The Transducer as a Three-Port Network, 29

*Example: electrical input impedance of a transducer, 32*

1.4.3 Mason Equivalent Circuit, 33

*Example: clamped transducer, 34*

1.4.4 Redwood Equivalent Circuit, 35

*Example: open-circuited pulse-excited acoustically matched receiving transducer, 35*

1.4.5 Impedance of an Unloaded Transducer, 35

*Equivalent circuit of an unloaded transducer, 37*

1.4.6 Broadband Operation of Transducers into an Acoustic Medium: The KLM Model, 41

*Effect of reflections on the response of a transducer to a sinusoidal signal, 45*

*Half-wave and quarter-wave resonators, 47*

1.4.7 Pulse Response of a Transducer with Arbitrary Terminations, 47

*Air-backed transducer and unmatched front surface, 50*

*Example: PZT transducer, 50*

1.4.8 Electrical Input Impedance of a Loaded Transducer, 51

*Constructional techniques, 51*

*Electrical impedance at resonance, 52*

*Terminated transducer ( $Z_1 = Z_2 = Z_C$ ) or  $Z_1 = 0, Z_2 = Z_C$ , 52*

1.4.9 Efficiency of Power Transfer to Transducer, 53

*Example: zinc oxide transducer on sapphire, 54*

1.4.10 Electrical Matching of a Loaded Transducer for Optimum Bandwidth and Efficiency, 55

*Transducer acoustically matched at each end,  $Z_1 = Z_2 = Z_C$ , 56*

*Air-backed transducer matched at output,  $Z_1 = 0, Z_2 = Z_C$ , 56*

*Example: acoustic emission transducer, 57*

*$Z_1 < Z_C$  and  $Z_2 < Z_C$ , 57*

*Optimum value of the acoustic load with the source resistance  $R_0 = 0$ , 58*

*Optimum value of the acoustic load with electrical tuning and source impedance  $R_0 = R_{\text{ac}}$ , 60*

*Tuned and untuned transducer,  $Z_1 = Z_2 = Z_C$ , 60*

*Tuned and untuned air-backed transducer with  $Z_2 = Z_C$ , 60*

1.4.11 Reeder-Winslow Design Method for Air-Backed Transducers, 61

*Example:  $Z_1 = Z_2 \gg Z_C$ , 65*

1.4.12 Some Examples of Transducer Design, 66

Problem Set 1.4, 71

**1.5 TENSOR NOTATION AND CONSTITUTIVE  
RELATIONS FOR PIEZOELECTRIC AND  
NONPIEZOELECTRIC MATERIALS 75**

- 1.5.1 Introduction, 75
- 1.5.2 Mathematical Treatment, 75
  - Displacement and strain*, 75
  - Stress*, 76
  - Hooke's law and elasticity*, 77
  - Tensor notation*, 77
  - Reduced subscript notation*, 78
- Problem Set 1.5, 83

## **Chapter 2 Waves in Isotropic Media**

**85**

**2.1 INTRODUCTION 85**

**2.2 BASIC THEORY FOR WAVES IN ISOTROPIC  
MEDIA 86**

- 2.2.1 Mathematical Formalism for Waves in Isotropic Media, 86
  - Lamé constants*, 86
  - Dilation and Hooke's law*, 86
  - Energy*, 87
  - Ideal fluid*, 87
  - Young's modulus and the extensional wave velocity*, 88
  - Poisson's ratio*, 88
  - Shear, longitudinal, extensional, and strip guide wave velocities*, 89
- 2.2.2 Equations of Motion for Solids and Fluids, 90
- 2.2.3 Wave Equation in an Isotropic Medium, 92
  - Longitudinal waves*, 93
  - Shear waves*, 94
- 2.2.4 Plane Wave Reflection and Refraction, 94
  - Incident longitudinal wave*, 96
  - Conversion of longitudinal to shear waves and shear to longitudinal waves*, 98
  - Reflection and refraction*, 100
- Problem Set 2.2, 104

**2.3 ACOUSTIC WAVEGUIDES 105**

- 2.3.1 Introduction, 105
- 2.3.2 Shear Horizontal Modes, 106
- 2.3.3 Lamb Waves, 108
- 2.3.4 Surface Waves, 109
  - Rayleigh waves in an isotropic medium*, 110
- Problem Set 2.3, 114

## 2.4 INTERDIGITAL TRANSDUCERS 117

- 2.4.1 Introduction, 117
- 2.4.2 Delta-Function Model of the Transducer, 119
  - Example: uniform transducer, 120*
- 2.4.3 Network Theory of the Transducer, 123
- Problem Set 2.4, 130

## 2.5 NORMAL-MODE THEORY AND PERTURBATION THEORY 131

- 2.5.1 Introduction, 131
- 2.5.2 Power Flow Concepts, 133
  - Normalization, 134*
- 2.5.3 Excitation of a Surface Acoustic Wave, 134
  - Physical implications of the excitation equations, 135*
  - Quantitative evaluation of  $g_n(z)$ , 135*
- 2.5.4 Perturbation Theory of the Interdigital Transducer, 137
- 2.5.5 Leaky Waves, 141
  - Example: aluminum substrate loaded by water, 144*
- 2.5.6 Wedge Transducer, 144
  - Finite attenuation, 146*
  - Efficiency variation with incident angle or velocity, 147*
  - Example: excitation of surface acoustic waves in aluminum from water, 149*
  - Reflected wave, 149*
  - Example: reflection of waves from aluminum in water, 149*
  - Experimental results, 150*
- Problem Set 2.5, 150

# Chapter 3 Wave Propagation with Finite Exciting Sources

154

## 3.1 DIFFRACTION AND NONUNIFORM EXCITATION 154

- 3.1.1 Introduction, 154
- 3.1.2 Spherical Waves in a Liquid or Solid, 156
  - Vibrating sphere, 156*
  - Liquid medium, 157*
- 3.1.3 Green's Function, 158
  - Helmholtz's theorem, 159*
  - Sommerfeld radiation condition, 160*
  - Kirchhoff formula, 160*
  - Rayleigh-Sommerfeld formula, 161*
  - Rigid baffle, 162*
  - Pressure release baffle, 162*
  - Transient source, 163*
- Problem Set 3.1, 163

### 3.2 PLANE PISTON TRANSDUCERS 164

#### 3.2.1 Fields on the Axis, 164

*Fresnel or paraxial approximation, 165*

*Fraunhofer and Fresnel zone, 165*

*Fraunhofer approximation, 167*

#### 3.2.2 Radial Variation of the Field Using a Hankel Transform and Spatial Frequency Concepts, 171

*Example: piston transducer for probing the human body, 175*

#### 3.2.3 Diffraction from Rectangular Transducers, 175

*Fraunhofer diffraction field by the method of stationary phase, 178*

*3 dB points, 180*

Problem Set 3.2, 180

### 3.3 FOCUSED TRANSDUCERS 182

#### 3.3.1 Field of a Focused Spherical Transducer, 182

*Transverse definition, 185*

*3-dB definition, F number, and lens aperture, 185*

*Sidelobes, 185*

*Coherent and incoherent imaging, 186*

*Rayleigh two-point definition, 187*

*Sparrow two-point definition, 189*

*Speckle, 189*

*Depth of focus, 190*

*Geometrical concepts for depth of focus, 191*

*Example: focused transducer for medical applications, 194*

*Reflection from a plane reflector, 194*

*3-dB resolution for  $V(z)$ , 196*

#### 3.3.2 Scanned Acoustic Microscope, 197

#### 3.3.3 Gaussian Beams and the Paraxial Equation, 206

*Wave equation for paraxial beams, 206*

*Gaussian beam, 207*

*Apodization, 209*

Problem Set 3.3, 210

### 3.4 PULSED EXCITATION OF TRANSDUCERS 212

*Transient response on- and off-axis of a piston resonator, 213*

*Fresnel region, 214*

*Fraunhofer region, 215*

*Excitation with a tone burst, 216*

Problem Set 3.4, 218

### 3.5 LENSLESS ACOUSTIC IMAGING 218

#### 3.5.1 Introduction, 218

A. Applications of Acoustic Imaging, 218

B. A-Scan, B-Scan, and C-Scan Imaging, 220

*A-scan, 220*

*B-scan, 222*

*C-scan, 223*

C.	Focusing Systems and High-Speed Scanning,	225
	<i>Elimination of physical lenses,</i>	226
	<i>Physical lens,</i>	227
	<i>Time delay focusing,</i>	227
	<i>Phase delay focusing,</i>	228
3.5.2	Basic Imaging Theory,	229
A.	Matched Filter Concepts,	229
B.	Paraxial Approximation,	231
	<i>Line spread function,</i>	232
	<i>3-dB definition of a paraxial rectilinear system,</i>	232
C.	A Radial Sector Scan System,	232
	<i>Rayleigh criterion,</i>	234
	<i>Sparrow criterion,</i>	235
	<i>Range definition,</i>	235
D.	Generalization of the Matched Filter Theory,	237
E.	Sidelobes and Grating Lobes,	238
	<i>Grating lobes,</i>	239
	<i>Examples of apodization and grating lobes,</i>	241
F.	Effect of Missing Elements (Amplitude Errors),	243
3.5.3	Fresnel Lenses and Digital Sampling,	245
A.	Basic System,	245
B.	Fresnel Lens Sidelobes and Phase Sampling in Digital Systems,	248
	<i>Sidelobe level,</i>	249
3.5.4	Chirp-Focused System,	251
A.	A Basic System,	251
B.	Various Forms of Chirp-Focused Systems,	255
3.5.5	Time-Delay and Tomographic Systems,	258
A.	Introduction,	258
B.	TV Display,	265
C.	Sidelobes, Grating Lobes, and Sampling Lobes in Time Delay Systems,	265
	<i>Range resolution,</i>	266
	<i>Transverse definition,</i>	266
	<i>Grating lobes,</i>	267
D.	Examples of Synthetic Aperture Imaging,	270
	<i>Imaging modes,</i>	270
	<i>Surface acoustic wave imaging,</i>	272
E.	Tomographic Imaging Systems,	275
3.5.6	Acoustic Holography,	277
A.	Introduction,	277
B.	Holographic Reconstruction with Spherical Reference Waves,	279
	<i>Spherical wave sources,</i>	281
	<i>Reconstruction of the image,</i>	282
C.	Water-Air Surface as an Acoustic Imaging Intensity Detector,	285
	<i>Smith and Brenden holographic technique,</i>	286
D.	Scanned Holographic Imaging,	288
E.	The Scanning Laser Acoustic Microscope,	291
F.	Holographic Imaging of Vibrating Objects,	294
	Problem Set 3.5,	296

<b>3.6 REFLECTION AND SCATTERING BY SMALL AND LARGE OBJECTS</b>	<b>300</b>
3.6.1 Introduction,	300
3.6.2 Scattering by Large Objects (Physical Concepts),	301
3.6.3 General Scattering Theory,	303
<i>Surface integral formulation,</i>	303
<i>Volume integral formulation,</i>	304
<i>Born approximation,</i>	305
<i>Quasistatic approximation,</i>	306
<i>Example: scattering from a rigid sphere in a liquid,</i>	307
<i>Example: air bubbles and sand grains in water,</i>	308
<i>Kirchhoff approximation for scattering from a large sphere (<math>ka \gg 1</math>),</i>	308
<i>Comparison with exact results and the concept of creeping waves,</i>	309
<i>Generalizations of the theory,</i>	310
Problem Set 3.6,	312

## Chapter 4 Transversal Filters 318

<b>4.1 INTRODUCTION</b>	<b>318</b>
<b>4.2 LINEAR PASSIVE SURFACE WAVE DEVICES</b>	<b>322</b>
4.2.1 Interdigital Transducer,	322
<i>Digitally coded devices,</i>	322
<i>Mathematical model of the transducer,</i>	326
4.2.2 Bandpass Filter,	329
<i>Uniform transducer,</i>	329
<i>Apodized transducer,</i>	330
4.2.3 FM Chirp Analog Filter,	332
4.2.4 Resonators,	334
4.2.5 RAC Filters,	335
4.2.6 Stabilized SAW Oscillators,	336
Problem Set 4.2,	337
<b>4.3 CHARGE-TRANSFER DEVICES</b>	<b>339</b>
4.3.1 Introduction,	339
4.3.2 Bucket Brigade Devices,	341
<i>Performance limitation of the BBD,</i>	342
4.3.3 Charge-Coupled Devices,	347
4.3.4 Effect of Imperfect Charge-Transfer Efficiency,	352
4.3.5 Single Transfer Devices (Switched Capacitors),	356
Problem Set 4.3,	358
<b>4.4 MATCHED FILTERS</b>	<b>359</b>
4.4.1 Introduction,	359
4.4.2 Matched Filter Theory,	361

<i>Example: A matched filter for a square pulse,</i>	364
<i>Matched filter in the frequency domain,</i>	365
4.4.3 Pulse Compression,	366
4.4.4 Matched Filters for Complex Signals,	367
4.4.5 Range and Velocity Accuracy of a Radar System,	368
<i>Simple physical treatment,</i>	368
<i>More rigorous treatment,</i>	369
<i>Accuracy of frequency measurement,</i>	372
<i>Uncertainty relation,</i>	372
<i>Proof of the inequality,</i>	373
<i>Narrowband waveforms,</i>	373
4.4.6 Ambiguity Function,	376
Problem Set 4.4,	382

#### 4.5 FM CHIRP FILTERS AND CHIRP TRANSFORM PROCESSORS 383

4.5.1 Introduction,	383
4.5.2 Mathematical Treatment of FM Chirp Filter,	384
<i>Width of main lobe,</i>	385
<i>Sidelobes,</i>	385
<i>Physics of FM Chirp Filter,</i>	386
4.5.3 Filter Weighting for Sidelobe Reduction,	387
<i>Effect of apodization on signal-to-noise ratio,</i>	390
4.5.4 Fourier Transform Operations with FM Chirp Filters,	391
<i>Compressive receiver,</i>	395
<i>Variable bandpass–bandstop filters and bandshape filters,</i>	395
<i>Variable-time-delay filters,</i>	396
<i>Correlation or convolution of two signals,</i>	396
<i>Spectral whitening and nonlinear processing,</i>	399
4.5.5 The Implementation of the Chirp z Transforms with SAW Devices,	399
<i>Experimental SAW FFT processor realization,</i>	404
4.5.6 Chirp z Transform with a CCD,	406
<i>Sliding transform,</i>	408
4.5.7 Chirp Transforms with Superconductive Delay Lines,	409
Problem Set 4.5,	413

#### 4.6 BANDPASS FILTERS 415

4.6.1 Introduction,	415
4.6.2 Strip Coupler,	416
4.6.3 Amplitude-Weighted Bandpass Filters,	421
4.6.4 Phase-Weighted Transducers,	426
4.6.5 Building Block Design Technique,	427
4.6.6 Recursive Filters and Comb Filters,	432
A. Introduction,	432
B. Recursive Filter with Feedback,	434
<i>Example of an SAW recursive comb filter,</i>	436
C. Fiber-Optic Recursive Filters,	439
Problem Set 4.6,	443

## 4.7 CONVOLVERS 448

- 4.7.1 Introduction, 448
- 4.7.2 Acoustic Convolver, 449
- 4.7.3 Spread-Spectrum Communications, 454
  - Spread-spectrum systems for communications*, 458
  - Range finding*, 459
- 4.7.4 Waveguide Convolvers, 459
- 4.7.5 Semiconductor convolver, 461
- 4.7.6 Acoustic Convolver Using External Mixers, 464
- 4.7.7 CCD Convolver or Correlator, 467
- 4.7.8 SAW Storage Correlator, 469
  - Tapped-delay-line correlator*, 470
  - Monolithic and air gap storage correlators*, 471
  - Input correlation mode*, 474
  - Spread-spectrum communications*, 475
- Problem Set 4.7, 478

## 4.8 ADAPTIVE FILTERS 480

- 4.8.1 Introduction, 480
- 4.8.2 Removing Phase Errors with an Adaptive Matched Filter, 481
- 4.8.3 Inverse Filter, 482
- 4.8.4 Wiener Filter, 488
  - Pseudo-inverse filter*, 491
- 4.8.5 Storage Correlator as an Adaptive Wiener Filter, 492
- 4.8.6 Elimination of an Interfering Signal with an SAW Correlator, 495
  - Other uses for adaptive filters*, 497
- Problem Set 4.8, 498

## 4.9 ACOUSTO-OPTIC FILTERS 501

- 4.9.1 Introduction, 501
- 4.9.2 Photoelastic Effect, 501
  - Example: Piezo-optic constant of water*, 503
- 4.9.3 Light Diffraction by Sound, 503
  - Acousto-optic figure of merit*, 505
  - Example: calculation of  $v(w)$  for water*, 506
  - Limitations of Rahman-Nath theory*, 508
  - Example: Rahman-Nath criterion for water*, 509
- 4.9.4 Schlieren Effect, 509
- 4.9.5 Bragg Diffraction by Sound, 511
  - Diffraction theory*, 513
  - Rahman-Nath interaction  $Q \ll \pi/2$* , 513
  - Bragg regime  $Q \gg \pi/2$* , 514
  - Response as a function of acoustic beam profile*, 514
  - Response as a function of input angle  $\theta_i$* , 515
  - Response as a function of input frequency*, 515
- 4.9.6 Application of Bragg Deflection Systems, 517
- 4.9.7 Acousto-Optic Convolver, 518

4.9.8 Time-Integrating Correlator,	521
<i>One-dimensional transforms,</i>	524
<i>Two-dimensional transforms,</i>	526
Problem Set 4.9,	528

## Appendix A    **Stress, Strain, and the Reduced Notation** 537

### STRESS AND STRAIN VECTORS    537

Strain Tensor,	537
Change in Volume,	540
Stress Tensor,	540
Equation of Motion,	542

### SYMBOLIC NOTATION AND ABBREVIATED SUBSCRIPTS    542

Strain Tensor,	542
Stress Tensor,	544
Elasticity,	544
Example: A Cubic Crystal,	545
Example: Isotropic Material,	546

### PIEZOELECTRIC TENSORS    546

### REFERENCE    547

## Appendix B    **Acoustic Parameters of Common Materials** 548

### TABLE B.1: BULK MATERIAL CONSTANTS FOR SELECTED SOLIDS    549

### TABLE B.2: MATERIAL CONSTANTS FOR LIQUIDS    552

### TABLE B.3: ACOUSTIC CONSTANTS FOR GASES    553

### TABLE B.4: PROPERTIES OF COMMONLY USED PIEZOELECTRIC CERAMICS    554

### TABLE B.5: PROPERTIES OF SELECTED TRANSDUCER MATERIALS    557

### TABLE B.6: PROPERTIES OF SOME COMMON ACOUSTO-OPTIC MATERIALS    560

**TABLE B.7: MATERIAL CONSTANTS OF SOME  
COMMON ACOUSTO-OPTIC  
MATERIALS 560**
