1. Introductory survey	1
2. Acoustic waves in elastic solids	15
2.1 Elasticity in anisotropic materials	15
2.1.1 Non-piezoelectric materials	15
2.1.2 Piezoelectric materials	17
2.2 Waves in isotropic materials	19
2.2.1 Plane waves	19
2.2.2 Rayleigh waves in a half-space	21
2.2.3 Shear-horizontal waves in a half-space	25
2.2.4 Waves in a layered half-space	25
2.2.5 Waves in a parallel-sided plate	28
2.3 Waves in anisotropic materials	29
2.3.1 Plane waves in an infinite medium	30
2.3.2 Theory for a piezoelectric half-space	30
2.3.3 Surface-wave solutions	32
2.3.4 Other solutions	34
2.3.5 Materials for devices	36
3. Electrical excitation at a plane surface	39
3.1 Non-piezoelectric half-space	39
3.2 Piezoelectric half-space	42
3.3 Some properties of the effective permittivity	45
3.4 Green's function	50
3.5 Other applications of the effective permittivity	52
4. Analysis of interdigital transducers	57
4.1 Delta-function model	57
4.2 Discussion of second-order effects and methods of analysis	64
4.3 Analysis for a general array of electrodes	67
4.3.1 The quasi-static approximation	67

4.3.2 Electrostatic equations and charge superposition	70
4.3.3 Current entering one electrode	72
4.3.4 Evaluation of the acoustic potential	74
4.4 Quasi-static analysis of transducers	75
4.4.1 Launching transducer	76
4.4.2 Transducer admittance	77
4.4.3 Receiving transducer	78
4.4.4 Scattering coefficients	80
4.5 Transducers with regular electrodes	83
4.5.1 Electrostatic charge density and element factor	83
4.5.2 End effects	88
4.5.3 Transducer response in terms of gap elements	88
4.6 Admittance of uniform transducers	89
4.6.1 Acoustic conductance and susceptance	89
4.6.2 Capacitance	93
4.6.3 Comparative performance	94
4.7 Two-transducer devices	95
4.7.1 Devices using unapodised transducers	96
4.7.2 Device using one apodised transducer	97
4.7.3 Apodised transducer with regular electrodes	99
4.8 Device response allowing for terminating circuits	100
4.8.1 Main response	102
4.8.2 Multiple-transit responses	103
5. The multi-strip coupler and its applications	107
5.1 Analysis for an infinite array of electrodes	109
5.2 Basic coupler behaviour	113
5.3 Interdigital devices using couplers	118
5.4 Unidirectional transducer	120
5.5 Other applications of 3-dB couplers	123
5.6 Bandpass filtering using multi-strip couplers	124
5.7 Beam compression	126
6. Propagation effects and materials	129
6.1 Surface-wave probing	129
6.2 Diffraction and beam steering	132
6.2.1 Formulation using angular spectrum of plane waves	133
6.2.2 Beam steering in the near field	134
6.2.3 Minimal-diffraction orientations	136
6.2.4 Diffracted field in the parabolic approximation: scaling	137
6.2.5 Two-transducer devices	140
6.3 Propagation loss and non-linear effects	144
6.4 Temperature effects and velocity errors	147
6.5 Materials for surface-wave devices	151

7. Delay lines and multi-phase transducers	157
7.1 Delay lines	157
7.1.1 Bandwidth and conversion loss of uniform transducers	158
7.1.2 Parasitic components	165
7.1.3 Triple-transit signal	168
7.1.4 Delay line types and performance	171
7.2 Multi-phase unidirectional transducers	173
7.2.1 Transducer types and performance	173
7.2.2 Analysis of multi-phase transducers	176
8. Bandpass filters	183
8.1 Apodised transducer as a transversal filter	184
8.1.1 Transversal filter analogy	185
8.1.2 Sampling and surface-wave transducers	187
8.1.3 Examples of particular cases	189
8.2 Design of apodised transducers	192
8.2.1 Use of window functions	193
8.2.2 Optimised design methods	197
8.2.3 Minimum-phase filters	199
8.3 Thinning and withdrawal weighting	200
8.4 Filter design and performance	203
8.4.1 Basic types of bandpass filter	203
8.4.2 Circuit effect	204
8.4.3 Second-order effects and design	205
8.4.4 Performance	206
8.4.5 Other types of bandpass filter	208
8.5 Filter banks	209
9. Chirp filters and their applications	213
9.1 Principles of pulse compression radar	214
9.2 Waveform characteristics and design	219
9.2.1 Stationary-phase approximation	221
9.2.2 Linear chirp waveforms	222
9.2.3 Weighting of linear-chirp filters	224
9.2.4 Weighting using non-linear chirps	229
9.3 Chirp transducers	231
9.3.1 Transducer analysis	233
9.3.2 Admittance in the stationary-phase approximation	236
9.3.3 Transducer design	239
9.4 Design and performance of interdigital devices	241
9.5 Second-order effects in chirp filters	247
9.5.1 Effect of phase errors on compressor output waveform	247
9.5.2 Velocity errors and temperature effects	250
9.5.3 Doppler shifts	252
9.5.4 Other second-order effects in interdigital devices	255

9.6 Reflective array compressors	256
9.6.1 Basic principles	256
9.6.2 Analysis and performance	259
9.6.3 Other types of RAC	267
9.7 Spectrum analysis and other types of signal processing	268
9.7.1 Compressive receiver principles	268
9.7.2 Analysis of compressive receivers and Fourier transform systems	270
9.7.3 Experimental compressive receivers and Fourier transform systems	275
9.7.4 Other types of signal processing	277
10. Devices for spread-spectrum communications	281
10.1 Principles of spread-spectrum systems	282
10.2 Linear devices	285
10.2.1 Matched filters for PSK waveforms	286
10.2.2 Output waveform and effect of phase errors	288
10.2.3 Devices for MSK waveforms	290
10.2.4 Frequency hopping	293
10.3 Acoustic convolvers	294
10.3.1 Principles of non-linear convolvers	295
10.3.2 Performance of basic convolvers	300
10.3.3 Waveguide convolvers	305
10.3.4 Convolver fidelity and frequency response	309
10.4 Other non-linear devices	312
10.4.1 Semiconductor convolvers	312
10.4.2 Storage convolvers	314
10.4.3 Correlation of long waveforms	316
10.5 Oscillators	318
10.5.1 Delay-line oscillator	318
10.5.2 Resonators	319
10.5.3 Oscillator performance	321
Appendix A. Fourier transforms and linear filters	325
A.1 Fourier transforms	325
A.2 Linear filters	330
A.3 Matched filtering	332
A.4 Non-uniform sampling	334
A.5 Some properties of bandpass waveforms	337
Appendix B. Reciprocity	343
B.1 General relation for a mechanically free surface	343
B.2 Reciprocity for two-terminal transducers	344
B.3 Symmetry of the Green's function	347
B.4 Reciprocity for surface excitation of a half-space	348

CONTENTS	xi
B.5 Reciprocity for surface wave transducers	348
B.6 Surface wave generation	351
Appendix C. Elemental charge density for regular electrodes	355
C.1 Some properties of Legendre functions	355
C.2 Elemental charge density	358
C.3 Net charges on electrodes	360
Appendix D. Floquet analysis for an infinite array of regular electrodes	363
D.1 General solution for low frequencies	363
D.2 Propagation outside the stop band	367
D.3 Stop bands	370
D.4 Solution at higher frequencies	372
Appendix E. Electrode interactions in transducers	375
E.1 Reflective array model	376
E.2 Electrode reflection coefficient due to electrical loading	381
E.3 Electrical loading in transducers	386
E.4 Mechanical loading	390
Appendix F. Bulk waves	393
F.1 Bulk wave generation by interdigital transducers	394
F.2 Mode conversion in arrays	397
F.3 Bulk wave devices	399
